

Incorporating social networking tools to facilitate participation and discussion in nuclear chemistry

M.N. Ali, Noel N. Chang, Mitch A. Garcia, Heino Nitsche.

Social networking tools such as blogs and wikis are powerful methods to distribute information and encourage participation among a large audience. A nuclear chemistry wiki creates a centralized and user-friendly database that makes this specialized field accessible to a generalized audience. Blogs are non-traditional methods of disseminating knowledge for an audience who does not have access to peer-review or institutional subscription. It provides a forum for young scientists to present novel ideas, encourages discussion, and accelerates advancements in the field of nuclear chemistry.
