Preface

As with the 1970 Census, the U.S. Department of Labor's Employment and Training Administration (ETA) has compiled a series of special reports for the use of program managers and other social scientists concerned with human resources.

These reports, which were designed cooperatively by federal, state and local government research staff, include much unpublished data from the 1980 Census Summary Tape Files. The reports in this series cover not only major government and census designated geographic areas in the United States, but also the unique administrative areas that concern program managers. The major report series are as follows:

- 1 Population Characteristics
- 2 Employment and Training Indicators
- 3 Social Indicators for Program Analysis, Planning and Evaluation
- 4 Racial/Ethnic Socio-Economic Profiles:
 - Asian Americans and Pacific Islanders
 - Black Americans
 - Hispanic Americans
 - Native Americans
- 5 Equal Employment Indicators
- 6 Journey to Work Patterns
- 7 Labor Force Estimations

In developing these reports, ETA and Lawrence Berkeley Laboratory utilized the latest techniques of information management, data retrieval, and computer graphics display to transform census data into an effective, easy-to-use format. The overall objective is to make public information accessible.

Acknowledgments

The 1980 Census Project is a joint undertaking of the Employment and Training Administration (ETA), Region IX, San Francisco and the Lawrence Berkeley Laboratory (LBL) of the University of California at Berkeley. The overall planning and execution of the report series was carried out in the Employment and Training Administration under the direction of Walter Postle, Chief, Management Data Systems and Analysis Division, Region IX, San Francisco. Division members working closely on the project included Bruce Bargmeyer, Warner Lee, and Cheryl Mendoza. James W. Higgins of the ETA Labor Market Information Division coordinated project requirements at the ETA National Office in Washington, D.C.

Work at LBL was under the direction of Carl Quong, Head, Computer Science and Mathematics Department. Harvard Holmes, project leader, coordinated the overall systems design and supervised all other aspects of the project. Robert Healey developed computer programs for census tape conversion and compression, geographic area selection, table specification, and report generation. Linda Wong was responsible for census tape processing, data archiving and installation. Wayne Graves developed improved techniques for tape conversion and data compression. Fred Gey, John McCarthy, and Deane Merrill developed basic elements of the database design, including data definition language, data dictionaries, and a general scheme for data caching and retrieval. Esther Schroeder developed programs for aggregating census-defined levels of geography to other geographic areas not available in the Census Bureau's summary tape files. William Benson enhanced the CHART program for addition of line, bar

and pie charts to the report series. Aaron Marcus was responsible for graphic design, composition and statistical table layout, with substantial contributions from Ilona Einowski of the State Data Program at the University of California, Berkeley. Bruce Burkhart handled all aspects of production, including data acquisition, administration and final output. Major hardware used to produce these reports include VAX 11/780 computers, a Dicomed film recorder, and a Xerox 9700 laser printer.

Printing and distribution of the basic reports were handled by Marvin Wilson, Associate Director, Office of Data Base Services, National Technical Information Service (NTIS) in Springfield, Virginia. Alan Wenberg was the NTIS product manager responsible for coordinating production facilities.

The report series was designed to meet the data needs of the managers and staff in the employment and training field. To insure that the report output meets the requirements of users, input was solicited from a variety of sources. Significant contributions to the content of the reports were made by the following offices and individuals:

Department of Labor National Office – Employment and Training Administration: Cynthia Ambler, Jeff Crandall, Betty Fautz, Matt Kessler, Alexandra Kielty, and Welforde Scales; Office of the Assistant Secretary for Policy, Evaluation and Research: Lynn Dusinberre; Bureau of Labor Statistics (BLS): Delores Turner; Office of Federal Contract Compliance Programs: Dale Barone and Sam Washington; Women's Bureau: Harriet Harper.

Department of Labor San Francisco Regional Office – Bureau of Labor Statistics (BLS): Pat Getz.

State Employment Security Agencies – Arizona: Fred Ninotti; California: Tre Braun and Ed Champlin; Connecticut: Salvatore Difillo and Roger Skelly; Hawaii: Claire Masaki; Maryland: James Earhart and Mary Lou Mogenhan; Mississippi: Raiford Crewes and Bill McNeece; Nevada: Bob Murdock; New York: Louis Schisa; South Carolina: Ted Gladden and Sam McClary; Texas: Horace Goodson and Terence Travland.

CETA Prime Sponsors – Baltimore: Robert Kaufman; Chicago: Dennis McAvo; San Francisco: Roberta Doyle and Ray Holland.

Other Offices – U.S. Census Bureau: Pat Kelly and Thomas Scopp; California State Census Data Center: Rich Lovelady and Bill Schooling; National Occupational Information Coordinating Committee: Jim Woods; Illinois State Occupational Information Coordinating Committee: Jan Staggs; Equal Employment Opportunity Commission: Gerald Kassalow; National Center for Educational Statistics: J. Fred Beamer.

This work was supported by the Office of Health and Environmental Research and the Office of Basic Energy Sciences of the U.S. Department of Energy under Contract No. DE-AC03-76SF00098; and the U.S. Department of Labor under Interagency Agreement No. 06-2063-36.

Introduction

Abstract	This report is a one-page profile of selected data from Summary Tape File 3 (STF3) of the 1980 Census of Population and Housing for various government units and census designated areas. STF3 summarizes sample-count data items, i.e., responses to questions that were in the long form distributed to 19 percent of the United States population nationwide. Data items in the report (inflated to represent the total population) include population by age, sex, race, ancestry, veteran status, education, disability, employment status, industry and occupation, income and poverty status.
Geographic coverage	Areas covered by Report 2A include: United States by State, SCSA and SMSA State by County State by Place with population of 2,500 or more U.S. by Employment and Training Administration (ETA) Region by Job Training Partnership Act (JTPA) Service Delivery Areas See "Technical Notes, Geographic Areas Covered by Report 2A" for details.
Race/Hispanic origin	Census data on race and Hispanic origin were obtained through self-identification. The five major racial groups shown are White, Black, Native American, Asian and Pacific Islander and Remaining Races. In this report, "Remaining Races" is defined as Total less White, Black, Native American and Asian and Pacific Islander. Persons of Hispanic origin may be of any race. See also footnotes (a) and (4) in the Technical Notes.
Symbols used in tables	Numbers or letters shown in parentheses to the right of row or column labels refer to footnotes beginning on page T-1. Numbered footnotes are drawn from the Census Bureau's "Technical Documentation" cited below; footnote numbers in this report follow the same numbering as that publication. Letter-designated footnotes are specific to this report. A dash "-" represents zero or a percent which rounds to less than 0.1. The three dot symbol "..." indicates data suppressed by the Census Bureau or a composite item one or more of whose components contained such suppressions. See the "Technical Notes" at the end of this report for further explanation.

Technical Notes

Introduction

Footnotes

Introduction

These technical notes cite references to more technical and detailed discussion of the 1980 Census data topics, provide footnotes for Report 2A, summarize special characteristics and limitations of census data, outline geographic areas covered in the standard Report 2A series, and explain special terms and data items specific to Report 2A.

Two major reference publications which users of these data may wish to consult and which are cited throughout these notes are PHC80-R1-A, "Users' Guide, Part A. Text" (cited below as the 1980 Census "Users' Guide"), and the "Census of Population and Housing, 1980: Summary Tape File 3 Technical Documentation" (cited below as "STF3 Technical Documentation"). The "Users' Guide" provides general information about the census, how data were collected, what questions were asked, etc., and provides an excellent overview of available publications, data, and services. The "STF3 Technical Documentation" provides detailed information about the specific computer files that were used to produce this report. Both publications are available in many libraries and may be ordered from the following source:

Data User Services Division
Data Access and Use Staff
Bureau of the Census
Washington, DC 20233
telephone: (301) 763-2074

Footnotes

Letter-designated footnotes in the tables are unique to this report. Numbered footnotes correspond to those in the "STF3 Technical Documentation". Census Bureau footnotes which do not pertain to data items in this report have been omitted.

Footnote (a)

Racial categories in Report 2A are the same as those in tabulation 12 of STF3, except that the Census Bureau category "American Indian, Eskimo, and Aleut" has

been renamed "Native American," and "Other (Race n.e.c.," has been renamed "Remaining Races." According to footnote (5) of STF3, the latter category (for sample data) excludes persons who have a write-in entry of an Asian and Pacific Islander group in the "Other" category.

Footnote (b)

In its December 1982 Data User News, the Census Bureau reported that a small number of long-form questionnaires from certain areas were incorrectly coded, resulting in an overstatement of incomes in the STF3 data (i.e., income figures were left justified rather than right justified for some respondents).

STF3 User Note 5 (1/83) lists the number of respondents whose income was incorrectly coded for each affected state and county, along with other information to help assess the potential impact of such errors. Of the more than 3000 counties in the U.S., 10 have errors for more than 1000 weighted respondents, and 138 have errors for 100 to 999 weighted respondents. In percentage terms, 7 counties have errors for 2 to 9 percent of the weighted respondents, and 32 counties have errors for 1 to 2 percent. Per capita income figures are from \$1000 to \$3900 too high for 17 counties, from \$500 to \$999 too high for 23 counties, and from \$100 to \$499 too high for 97 counties.

For income items in this report, mean income is the most likely to be affected substantially; for counties and larger areas, errors in median income and counts of persons in various income categories should be negligible. Where errors occur, mean income and the "\$50,000 and Over" income category will be overstated and other categories understated. Users should consult STF3 User Note 5 to assess error magnitudes for particular counties of interest.

Footnote (c)

Categories in this tabulation are not mutually exclusive or exhaustive. Households may receive more than one type

of income (e.g., one household may receive social security, wage, and self-employment income). In addition, two income types distinguished by the Census Bureau as "interest, dividends, royalties or net rental," and "income from all other sources" (e.g., veteran's payments, pensions, unemployment benefits, alimony and child support) are not listed here.

Footnote (d)

Tabulations of poverty status exclude inmates of institutions, members of the Armed Forces living in barracks or on military ships, college students living in dormitories, and unrelated individuals under 15 years old, see footnote (54). For explanation of how poverty status was determined by income, family size, number of children, and age, see the Census Bureau's "Data User News," Vol. 17, No. 7 (July 1982), page 6.

Footnote (4)

In the sample tabulations, "Asian and Pacific Islander" includes "Japanese," "Chinese," "Filipino," "Korean," "Asian Indian," "Vietnamese," "Hawaiian," "Guamanian," "Samoan," and those persons who have a write-in entry of an Asian or Pacific Islander group in the "Other" category.

Footnote (20)

Veterans are classified by the most recent period of service, excluding peace time service.

Footnote (41)

See Appendix B4 of STF3 Technical Documentation for definitions of inmate status (noninstitutional and institutional) and for codes of type of group quarters.

Footnote (42)

See Appendix B5 of STF3 Technical Documentation for industry codes.

Technical Notes (continued)
Footnotes (continued)
Data Characteristics and Limitations

Footnote (43)

See Appendix B6 of STF3 Technical Documentation for occupation codes.

Footnote (50)

Each sample person and housing unit was assigned a weight as the result of a complex ratio estimation procedure. These weights vary from person to person and from housing unit to housing unit, but on the average they are approximately equal to the inverse of each record's sample selection probability. The tabulations in this file are based on summing the weights of the appropriate persons or housing units relating to the tabulation.

For specified aggregates, indicated below, the characteristic data are multiplied by the weight; for example, in aggregate income for persons the amount of income is multiplied by the weight. In medians, the weights are brought to bear indirectly through the distribution used to calculate the measure. For family and household tabulations, only the weights of the householder are used. The following is a listing of the weights used in producing each tabulation:

Person weights - tabulations 1, 7, 8, 12-17, 19, 22, 24-67, 81-85, and 90-95.

Householder (person) weights - tabulations 9, 10, 18, 20, 21, 68-80, and 86-89.

Tabulations 70, 72, 77, 78,

and 80 are aggregates. Tabulations 69 and 74 are derived measures. Consult the STF3 Technical Documentation for further details.

Footnote (53)

Code ranges may include codes which are not used.

Footnote (54)

"Unrelated Individuals" include nonrelatives in family households, persons in nonfamily households, and noninmates in group quarters.

Data Characteristics and Limitations

These reports are intended to simplify use of census information. Users still need to be aware of data characteristics, definitions, and limitations. Users who do not check the definitions of census terms or who do not understand the concept of "universe" often misinterpret census data. For example, one may mistake family income for household income, may misinterpret the term "unemployed," or may not consider which persons are included in the "below poverty level" universe.

It is also important to understand the limitations of census data, including both sampling and non-sampling errors. This section, which summarizes a lengthier discussion from Chapter 6 of the 1980 Census "Users' Guide" and the "Technical Information" section of the STF3 Technical Documentation, addresses questions that should concern every data user.

Universes for Tabulation Items

Each tabulation in census materials and this report is an aggregate summary based on a particular "universe" of individual persons, families, households, or housing units to which data pertain. Indented row labels such as "Hispanic, all races" identify subsets of the universes identified at the top of each part of the table. Knowledge of the universe is thus crucial to interpretation of each table. Data based on different universes usually cannot be combined.

Complete Count and Sample Data

There were two types of 1980 census questionnaires: the short form and the long form. About 81 percent of households completed the short form, which contained seven questions about each household member, nine questions about the housing unit, and three questions to ensure that no person associated with the household was overlooked. Data derived from these questions are referred to as 100-percent or complete-count data.

A scientific sample of about 19 percent of all households nationwide completed the long form, which contained all the questions on the short form plus additional questions on 26 population and 20 housing subjects. Sampling allowed the Census Bureau to collect information on additional subjects while minimizing the overall reporting burden. Short-form or 100-percent data are more precise, but more limited than sample data.

Report 2A presents data drawn entirely from the long-form questionnaire (Summary Tape File 3). The data are estimates of actual figures that would have resulted from a complete count. Estimates can be expected to vary from the complete count result because they are subject to two basic types of error--sampling and nonsampling.

Nonsampling Errors

Both sample and non-sample data may contain occasional errors due to human and mechanical failures that inevitably occur during the course of any large-scale data collection operation such as the decennial census. Such errors include failure to enumerate every household or person in the population, not obtaining all required information from respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. Errors can also occur during the field review of the enumerators' work, the clerical handling of the census questionnaires, or the electronic processing of the questionnaires. The Census Bureau publications cited above discuss in some detail the various types of errors that could have occurred and the quality control measures that were employed in order to minimize such errors.

As discussed above, income data in this report may contain errors because of Census Bureau coding errors for certain areas. See footnote (b) above for further details.

Technical Notes (continued)

Data Characteristics and Limitations (continued)

As with the 1950, 1960, and 1970 censuses, there were programs at the conclusion of the 1980 census to measure various aspects of the quality achieved, including the degree of completeness of the count of persons and housing units. Preliminary estimates indicate that the rate of undercoverage in the 1980 census was reduced from 1970 undercoverage, which was estimated to be about 2.5 percent of the population.

Sample Data Variation and Accuracy

Since the data in this report are based on sample data from STF3, they may differ somewhat from complete-count figures that would have been obtained if all housing units and persons had been asked the same questions. The estimates in STF3 were obtained from an iterative ratio estimation procedure, details of which are described in the "Technical Information" section of the STF3 Technical Documentation. Estimates from the sample will, for the most part, be consistent with the complete count figures for the population and housing unit groups used in the estimation procedure. Variations may occur whenever data are for a geographic area that does not happen to be a sample weighting area or a combination of two or more sample weighting areas.

The basic sampling unit for the 1980 census was the housing unit, including all occupants. For persons living in group quarters, the sampling unit was the person. Two sampling rates were employed. In incorporated places of less than 2500 persons (based on precensus estimates), one-half of all housing units and persons in group quarters were included in the sample. In all other places, one-sixth of the housing units or persons living in group quarters were sampled. The purpose of this scheme was to provide relatively more reliable estimates for small places. When both sampling rates are taken into account across the Nation, approximately 19 percent of the Nation's housing units were included in the 1980 census sample.

The deviation of a sample estimate for any given item from the average of all possible samples for that item is called the sampling error. The sample estimate and its estimated standard error permit the construction of interval estimates for each item with prescribed confidence that the interval includes the average result of all possible samples. The "Technical Information" section of the STF3 Technical Documentation provides tables and formulae for calculating standard errors and confidence intervals for data from STF3. The magnitude of sampling error or variability is relatively small for large counts, but large for small counts. Thus sample data are adequate for producing basic tabulations for census tracts and larger areas, such as places, counties, SMSA's, and states, but not for blocks -- the lowest level reported by the Census Bureau -- or for detailed tabulations of basic items for larger areas.

Editing, Allocation, and Substitution

In order to produce statistics that describe the population as accurately and clearly as possible, the Census Bureau employed a variety of techniques which are described in chapters 2 and 6 of the 1980 Census "Users' Guide Part A. Text." After data were collected, certain unacceptable entries and blank items were edited, by machine whenever possible, and by hand when necessary.

In these cases, the Census Bureau assigned or substituted information rather than simply reporting the items as "missing." This process is called "substitution" when it involves all information for an individual or housing unit, and "allocation" when only some of the data items were involved. The editing process ensures that the distribution of characteristics for persons and housing units assigned by the computer corresponds closely to the distribution of characteristics for persons and housing units actually reported in the census. Specific tolerances were established for the number of computer allocations and substitutions permitted. If the number of

such corrections exceeded these designated tolerances, the questionnaires in which the errors occurred were clerically reviewed.

Data Item Suppression

In order to maintain the confidentiality promised to respondents and required by law, it is necessary for the Census Bureau to make sure that its public data do not disclose information about any individual. Therefore the Bureau suppresses tabulations of characteristics of very small groups of people or housing units. The STF3 Technical Documentation describes rules for suppression of sample data, with examples of different types of suppression, and discusses consequences of ignoring suppression in calculations.

Several basic counts are never suppressed, even if there is a count of only one. They are as follows:

- Total population
- Total housing units
- Year-round housing units
- Occupied housing units
- Vacant year-round housing units
- Count of persons and households for each race or Hispanic origin group.

Other types of data may be suppressed due to different criteria. Each type of suppression is indicated by a different numeric suppression flag, as shown in the "Table of Data Item Definitions" below and defined in the STF3 Technical Documentation. Suppression flags 1 through 6, respectively, apply when the total, White, Black, Native American, Asian and Pacific Islander, or Hispanic population of an area is less than 30 persons. Suppression flag 8 applies when an area has fewer than ten occupied housing units. Other suppression flags are not relevant for this report.

In some cases complementary suppression is applied to prevent the derivation of suppressed data by subtraction. For example, distributions of data for owners or renters are shown only when the number of owners is at least ten and the number of renters is also at least ten.

Technical Notes (continued)
Data Characteristics and Limitations (continued)
Geographic Areas Covered by Report 2A
Data Item Descriptions and Derivations

In this report series, the three dot symbol "..." indicates that data were suppressed by the Census Bureau or that data suppression occurred in one or more of the census items used in calculating the report item.

In most cases, suppressed data values are small (fewer than 10 or 30) except where a large population is affected by complementary suppression. In certain non-critical applications, users may choose to ignore suppressed values and treat them as zeros. However, when geographic entities are summed to new geographic areas, suppression will result in a downward bias in the totals. For advice on the consequences of ignoring suppression for such items, see the relevant section at the end of chapter 6 of the 1980 Census "Users' Guide."

Geographic Areas Covered by Report 2A

The Report 2A series provides data for government and census geographic areas described below. For a detailed discussion of census geographic areas, including hierarchical relationships, historical comparability, and availability of maps, see chapter 4 of the 1980 Census "Users' Guide" and Part I and Appendix A of the "STF3 Technical Documentation."

United States by State, SCSA, and SMSA

This single report presents data for the entire United States, Standard Consolidated Statistical Areas (SCSA's), Standard Metropolitan Statistical Areas (SMSA's), and state portions of multi-state SMSA's. An SMSA is a large population nucleus and nearby communities which have a high degree of economic and social integration with that nucleus. An SCSA is composed of two or more contiguous SMSA's. SMSA boundaries may change from year to year. Data are for SMSA's as defined in June 1981 by the Office of Management and Budget.

State by County

51 individual state reports present the same STF3 data for the state total and each county in the state.

State by Place

51 individual state reports present data for Places with 2,500 or more population, including both incorporated and Census Designated Places (CDP's). In 1970 and earlier censuses, CDP's were referred to as "unincorporated places."

U.S. by ETA-JTPA Service Delivery Area

This single report presents data for Employment and Training Administration (ETA) Regions and Job Training Partnership Act (JTPA) Service Delivery Areas (SDA's). Each SDA is a local government with 200,000 or more population, or any consortium of contiguous units of general local government with an aggregate population of 200,000 or more which constitutes a substantial part of a labor market area. In addition, the governor of a state may designate SDA's which constitute a substantial part of a labor market area, without regard to population limits. When available, a listing of the SDA areas may be ordered from:

Data Item Descriptions and Derivations

Labels for Report 2A have in most cases been taken directly from STF3 labels used by the Census Bureau. For more precise definition of these terms plus explanation of how STF3 tabulations were derived from the original census questionnaires, discussion of the limitations of particular data items, and information about comparability with historical items from previous censuses, see the "STF3 Technical Documentation" Glossary. For a more general and comprehensive treatment of definitions, limitations, and historical comparability

for individual data items, see the 1980 Census "Users' Guide" Glossary.

The tables below identify specific census table cells and computations used to produce each item in this report. Each row item in the table corresponds to a row label in the report. To the right of each item label are the pertinent Census Bureau suppression flags and algebraic expression for the count (N) and percentage (%) for each data item. (Except for values set to 100 percent, the algebraic expressions shown under "Pct. Calculation" give a fraction which varies from 0 to 1; for a percentage which varies from 0 to 100, multiply by 100.) In cases where this report uses a term that differs substantially from that used by the Census Bureau, the latter is given in parentheses below the row label that appears in the report.

In most cases, numeric values were taken directly from single cells of Summary Tape File 3, which are identified by tabulation number and subscript (e.g., tab48(1,1)), as in the "STF3 Technical Documentation." In cases where values were calculated from more than one census data item, the following algebraic notation is used: a plus "+" for addition, a minus "-" for subtraction, a slash "/" for division, a colon ":" for range or sequential multiple addition, and parenthesis for logical grouping. For example, tab53(1:3) means tab53(1) plus tab53(2) plus tab53(3).

NTIS ORDER FORM

Use this sheet or a copy to request additional reports or to request information about the 1980 Census Data Program.

Name

Title

Company or Organization

Complete Departmental and Locational Address

City, State, Zip Code

Telephone Number with Area Code Preceding

Please indicate the Reports you wish to order, the level of detail, and the geographic area(s) which the Reports are to cover, as shown in the example.

Report Number	Level of Detail	Geographic Area(s)
1 (example)	County (example)	State of California (example)

Note: An NTIS analyst will contact you to advise you of the estimated price for the requested Reports before any work is started. The Reports will only be produced after you have agreed to the estimated price.

Check to have an NTIS analyst contact me to discuss an order.
